Q: Finding the limit of  $g(x)$  when  $x \rightarrow 0$ . Given  $f$  is a function defined as:  $f(x) = \begin{cases} x^2, & x \in \mathbb{Z} \\ 0, & x \in \mathbb{R} \setminus \mathbb{Z} \end{cases}$   $g(x) = f(\lfloor x \rfloor) - f(x)$  Find the limit of  $g(x)$  when  $x \rightarrow 0$ . My answer:  $\lim_{x \rightarrow 0} g(x) = \lim_{x \rightarrow 0} (\lfloor x \rfloor^2 - \lfloor x \rfloor \lfloor x \rfloor - x) = \lim_{x \rightarrow 0} (\lfloor x \rfloor^2 - \lfloor x \rfloor \lfloor x \rfloor - x)$  Here is where I am stuck. I'm not really sure how to deal with the floor function, and I haven't got a clue how to find the value of  $x$ .

A: We notice that, for any  $y \in \mathbb{Z}$ ,  $\lfloor \lfloor y \rfloor \rfloor = y$ , while, for any  $y \in \mathbb{R} \setminus \mathbb{Z}$ ,  $\lfloor \lfloor y \rfloor \rfloor = \lfloor y \rfloor$ .

Download Half Life 1 Opposing Force Full No Crack For Android Half Life 1 Opposing Force Full Crack - Revolutionary & Full Hack In Just A Minute! This is THE #1 Remote Hack Tool in world & completely safe. You will never need to download a single virus onto your PC or your Phone. Our FULL HACK will hack ALL XP, Laptop, MAC and Android and IOS devices. Its extremely simple to use and will work on all devices immediately. No installers or registry keys, no viruses and no need to download any files. We have released our FULL HACK as a free download. Half Life 1 Opposing Force Full DownloadNo crack, no survey and no hidden charges. Just start hacking today and start making money. Try it now! Hurry, grab your copy now and let me show you why you should be using our easy-to-use and completely safe hack. Do not wait.HACK:Â . Half Life 1 Opposing Force Full. Halflife1opposingforcefulldownload. Halflife1opposingforcefulldownload.Q: What needs to change on this file to make it work for both Java 7 and 6? A little background - I'm creating a library that's mostly a collection of utilities for the work I do. I have a project which I use to build a jar file, as well as a build.xml file that does some minor things. What I'd like to know is if there's any way to make the build file more intelligent. What I'm stuck with is that we have an application that runs on Java 6, but also has the ability to run on Java 7. So my build.xml file basically has 2 sets of commands that are almost identical, except one uses a fork/exec to run the process. Is there any way to make the build file more intelligent so that it switches between the 2 commands based on whatever it detects the target is running on? An example of what I'd like the build file to do is: If someone runs ant jarfile or mvn package or any other command that would trigger the build for Java 7 Replace: exec { dir target/lib/bin executable="java" classpath=".lib/\*:/Users/dev/Downloads/groovy-2.3.4/groovy-all-2.3.4.jar" } with: exec { dir target/lib/bin executable="java" classpath=".lib/\*:/Users/dev/Downloads/groovy-2.3.4/groovy-all-2.3.4.jar" targetRuntime=7 } If someone runs ant jarfile or mvn package or any other command that would trigger the build for Java 6 Replace: exec { dir target/lib/bin executable="java" classpath=".lib/\*:/Users/dev/Downloads/groovy-2.3.4/groovy-all-2.3.4.jar" } with: exec { dir target/lib/bin executable="java" class
